

Mr. Eats-It Food Grade

A powerful solution for cleaning and remediating fats, oils, grease, and human and animal waste.

1. Product Name

Mr. Eats-It Food Grade Microbial Cleaner

2. Manufacturer

Microbial Restoration Services, LLC
16950 W. Sibelius Ln
Gurnee, IL 60031

3. Product Description

A powerful, specially formulated, microbial cleaning solution ideal for removing and remediating fats, oils, grease, protein, cellulose, starch as well as assist with cleaning grease traps and septic tanks. Mr. Eats-It Food Grade is the perfect choice for restaurants or food producing facilities where drain lines and grease traps are a problem. It is also effective for cleaning greasy floors and controlling odors as well as cleaning blood, vomit, and animal and human waste.

Key Features

- Safely removes fats, oils, and grease from concrete or tile floors without etching
- Excellent surface preparation cleaner for areas that are going to be sealed or coated
- Mr. Eats-It Food Grade does not need to be neutralized and will not leave a residue on the surface
- Degrades/eliminates organics that are found in drain lines and grease traps while also eliminating odors
- Penetrates into all cracks, crevices and pores of the various surfaces in bathrooms and kitchens where organics

accumulate, leaving them visually cleaner

- Mr. Eats-It Food Grade provides odor control by removing the organics that cause odors and preventing the return of odor causing compounds
- Eliminates the need for excessive pumping in septic tanks and water treatment facilities. The microbes will consume toilet tissue, hair, starches, and proteins that cause the tank and drain fields to become clogged

4. Instructions

Application of Product:

Read entire label before using. Shake before use. Product can be used upon open or it can be diluted with water up to 3:1.

Wet the surface and apply the microbes in the following manner: For floors and surfaces, spray, mop or pour Mr. Eats-It Food Grade onto dirty and/or greasy areas. Scrub with brush until area is covered and keep it moist with water. DO NOT let the area dry out.

Agitate Mr. Eats-It Food Grade with a deck brush, stiff bristle broom or mechanical scrubber. Agitation helps disperse the microbes and helps break down the fats, oils and grease for faster digestion. Agitate the surface periodically and keep the surface moist while the bacteria are working. The time needed for cleaning will vary between 10 to 15 minutes (if cleaning daily) or 1-2 hours if prepping for finished coatings. Upon completion, rinse thoroughly with clean water and rinse down a drain or wet vac from the floor. Dry the floor thoroughly and coat according to coating manufacturer's instructions.

Microbes do not etch concrete, contain caustics or acids and is PH neutral.

Cleaning Equipment

Rinse pump up sprayer with regular tap water, warm or cold.
